

SUSTAINABILITY OBJECTIVES

At First Quality, we strive to improve efficiency and be a responsible steward of our environment. Our facilities are constructed of state-of-the-art equipment with building efficiency in mind, and we are constantly pushing ourselves to improve. In order to achieve our mission, we are aligned on these objectives:

We use advanced analytics to determine our utilization of resources and their environmental footprint.

We provide internal team members analytics, information, and recommendations to assist them with making the most responsible decisions regarding our sustainable use of resources.

We persist to meet reduction targets of 3% for energy consumption per unit of production and overall carbon footprint year over year.

We strive in our goal of 0% waste to landfill at all of our facilities (currently 6 of our facilities are Landfill free).

We continue to seek new recycling opportunities and find new ways to use our resources more efficiently.

MAKE THINGS BETTER
